The screenshot shows the Visual Studio Code interface with the Extensions Marketplace open. The search bar contains 'codex'. The 'Codex – OpenAI's coding agent' extension by OpenAI is highlighted and marked as 'Installing'. A red callout bubble with the word 'Installing' points to this extension. The extension details panel on the right shows the extension's name, version (26.324.21329), and a description: 'Codex is OpenAI's coding agent that helps you write, review, and ship code faster. Use it side-by-side in your IDE or delegate larger tasks to the cloud.' The 'Pair with Codex' section provides instructions on how to use the extension. The 'Delegate to Codex in the cloud' section mentions offloading bigger jobs. The right sidebar shows the 'CHAT' panel with a 'Build with Agent' section and a text input field for describing what to build.

Codex – OpenAI's coding agei
OpenAI.com | 6,161,520 |
ing agent that works with you everywhere
cluded in ChatGPT Plus, Pro, Business,
prise plans.

Installing Auto Update

DETAILS FEATURES

Codex is OpenAI's coding agent that helps you write, review, and ship code faster. Use it side-by-side in your IDE or delegate larger tasks to the cloud.

Pair with Codex

Add Codex as a panel in VS Code to chat, edit, and preview changes seamlessly. With context from opened files and selected code, you can write shorter prompts and get faster, more relevant results. (Tip: many users like moving the Codex panel to the right side of the editor.)

Delegate to Codex in the cloud

Offload bigger jobs to Codex in the cloud, then track progress and review results without leaving

+ Auto ↕

Local Default Approvals

The image shows a screenshot of the Visual Studio Code (VS Code) interface. On the left, the 'EXTENSIONS: MARKETPLACE' sidebar is open, displaying a search for 'codex'. Several extensions are listed, including 'Codex - OpenAI's coding agent', 'Codex', 'Claude Opus 4.6, GP...', 'Codex-AI', 'Codex Switch', 'Codex Effect', and 'Codex UI'. The 'Codex - OpenAI's coding agent' extension is selected, and its details are shown in the main editor area. The details page includes the OpenAI logo, the extension name, a description, a 'Switch to Pre-Release Version' button, and an 'Auto Update' checkbox. Below this, there are sections for 'Pair with Codex' and 'Delegate to Codex in the cloud'. On the right side of the VS Code window, the 'CHAT' and 'CODEX' tabs are visible. The 'CODEX' tab is active, showing a chat interface with the text 'Codex' and a 'Sign in with ChatGPT' button. A red arrow points from the 'CHAT' tab to the 'CODEX' tab, with a speech bubble saying 'Make sure you are on the CODEX tab, not the CHAT'. Another red arrow points to the 'Sign in with ChatGPT' button, with a speech bubble saying 'Click "Sign in with ChatGPT" This should open a browser window'.

Extension: Codex – OpenAI's coding agent

Codex – OpenAI's coding agent
OpenAI openai.com | 6,161,520 |
★★★★☆ (308)
Codex is a coding agent that works with you everywhere you code — included in ChatGPT Plus, Pro, Business, Edu, and Enterprise plans.
Switch to Pre-Release Version Disable Uninstall
Auto Update

DETAILS FEATURES

Codex is OpenAI's coding agent that helps you write, review, and ship code faster. Use it side-by-side in your IDE or delegate larger tasks to the cloud.

Pair with Codex

Add Codex as a panel in VS Code to chat, edit, and preview changes seamlessly. With context from opened files and selected code, you can write shorter prompts and get faster, more relevant results. (Tip: many users like moving the Codex panel to the right side of the editor.)

The image shows the Visual Studio Code (VS Code) interface with the following components:

- Left Sidebar (Extensions View):** Displays the 'EXTENSIONS' panel with a search bar and categories: 'INSTALLED' (showing 'Codex - OpenAI's coding agent'), 'RECOMMENDED' (showing 'SVN' and 'GitLens'), and 'MCP SERVERS'.
- Main Editor Area:** Shows the 'Welcome' page with the title 'Get started with VS Code' and a list of tasks: 'Use AI features with Copilot for free', 'Choose your theme', and 'Watch video tutorials'. A 'Next Section' link is visible.
- Right Sidebar (CODEX Chat):** Shows the 'CHAT' and 'CODEX' tabs. The 'CODEX' tab is active, displaying a chat interface with a 'Try now' button and a text input field. A 'Settings' icon (gear) is highlighted in the top right corner of the CODEX tab.

Annotations and Callouts:

- A red box highlights the 'Settings' icon (gear) in the top right corner of the CODEX tab, with a callout that says: "Click the 'Settings' icon".
- A red box highlights the 'CHAT' and 'CODEX' tabs, with a callout that says: "Make sure you are on the CODEX tab, not the CHAT".

The image shows the Visual Studio Code interface with the 'Extension: Codex – OpenAI's coding agent' page open. A red arrow points to the 'Codex settings' option in the settings menu.

Left Panel (EXTENSIONS):

Click "Yes, I trust the authors"

1. Click the chat box and enter:

Use this command to build:

```
build\openrtos> test_timer.cmd
```

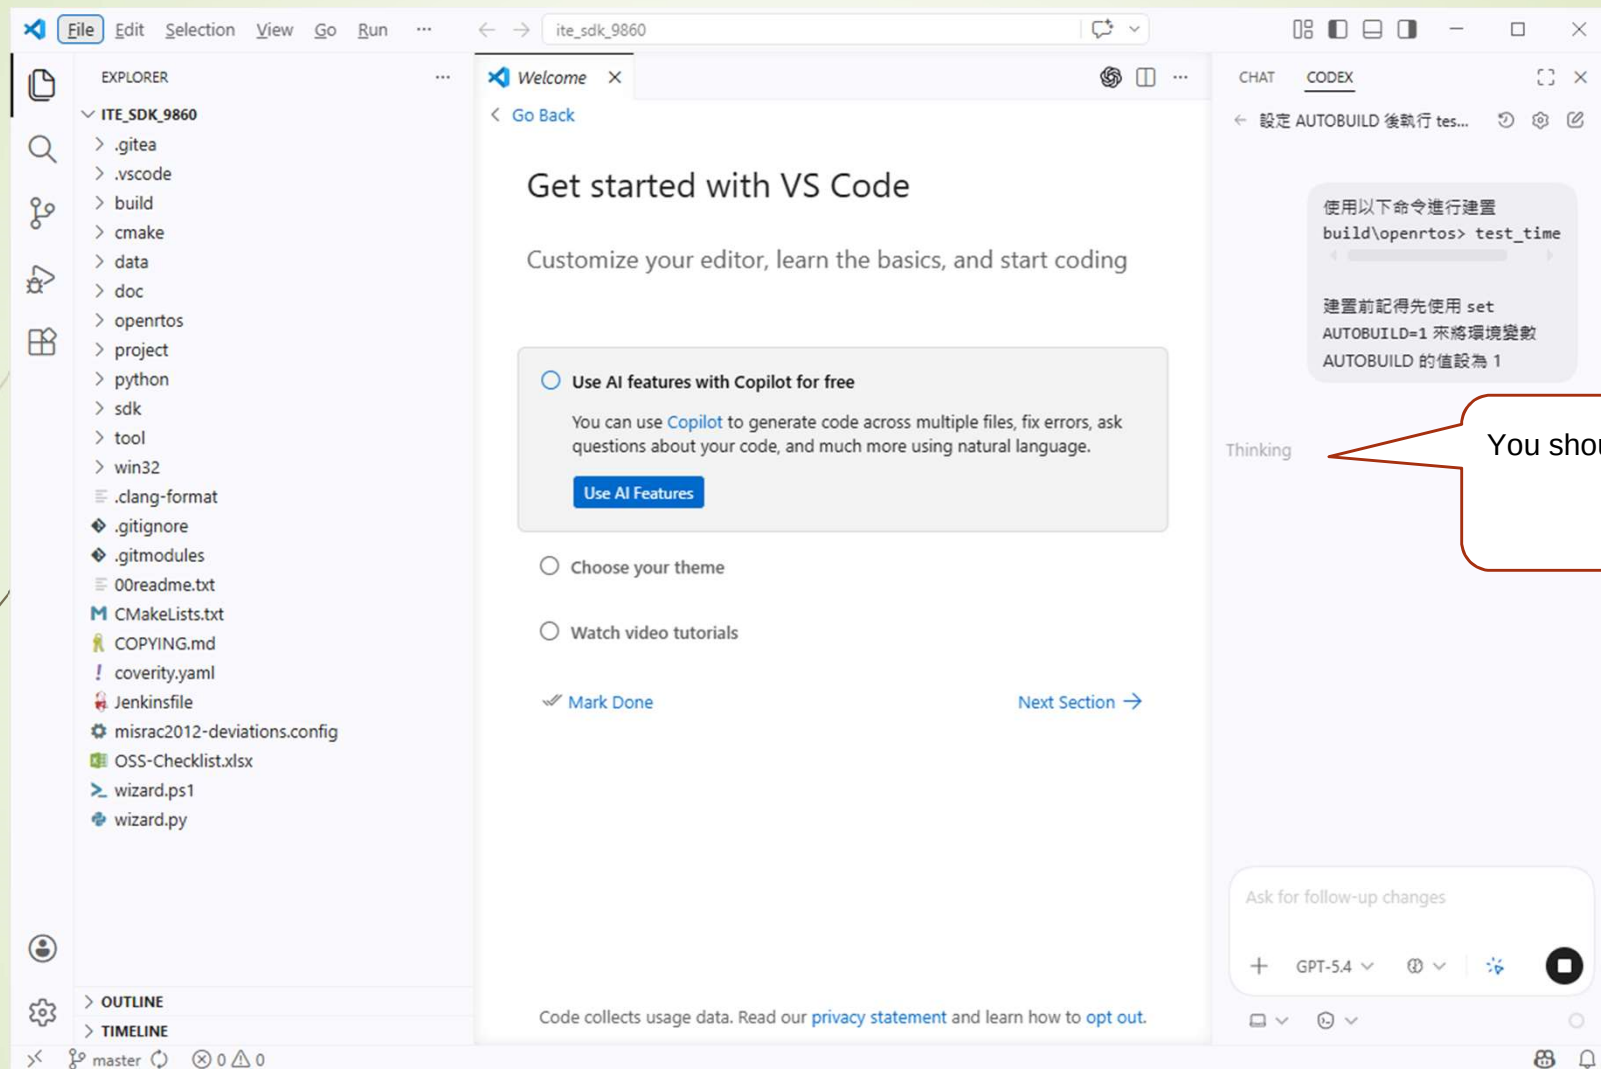

Before building, run:
set AUTOBUILD=1

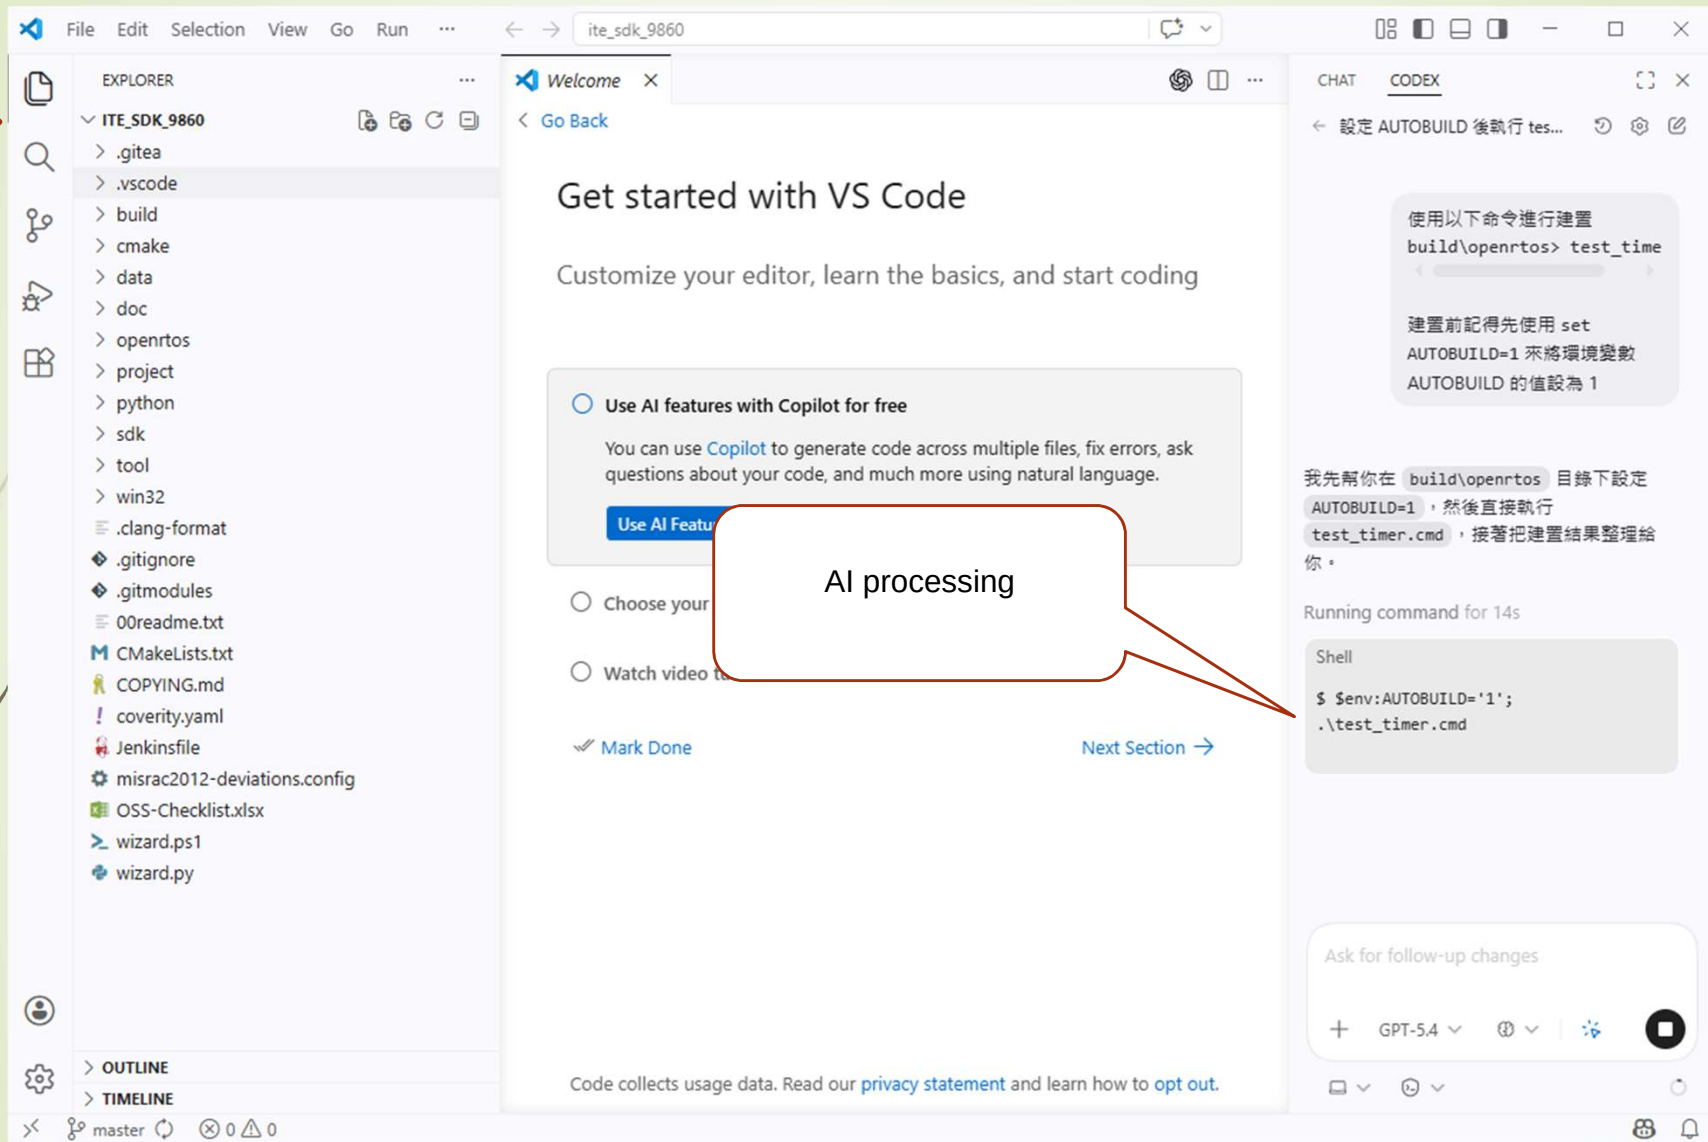

This sets AUTOBUILD to 1.

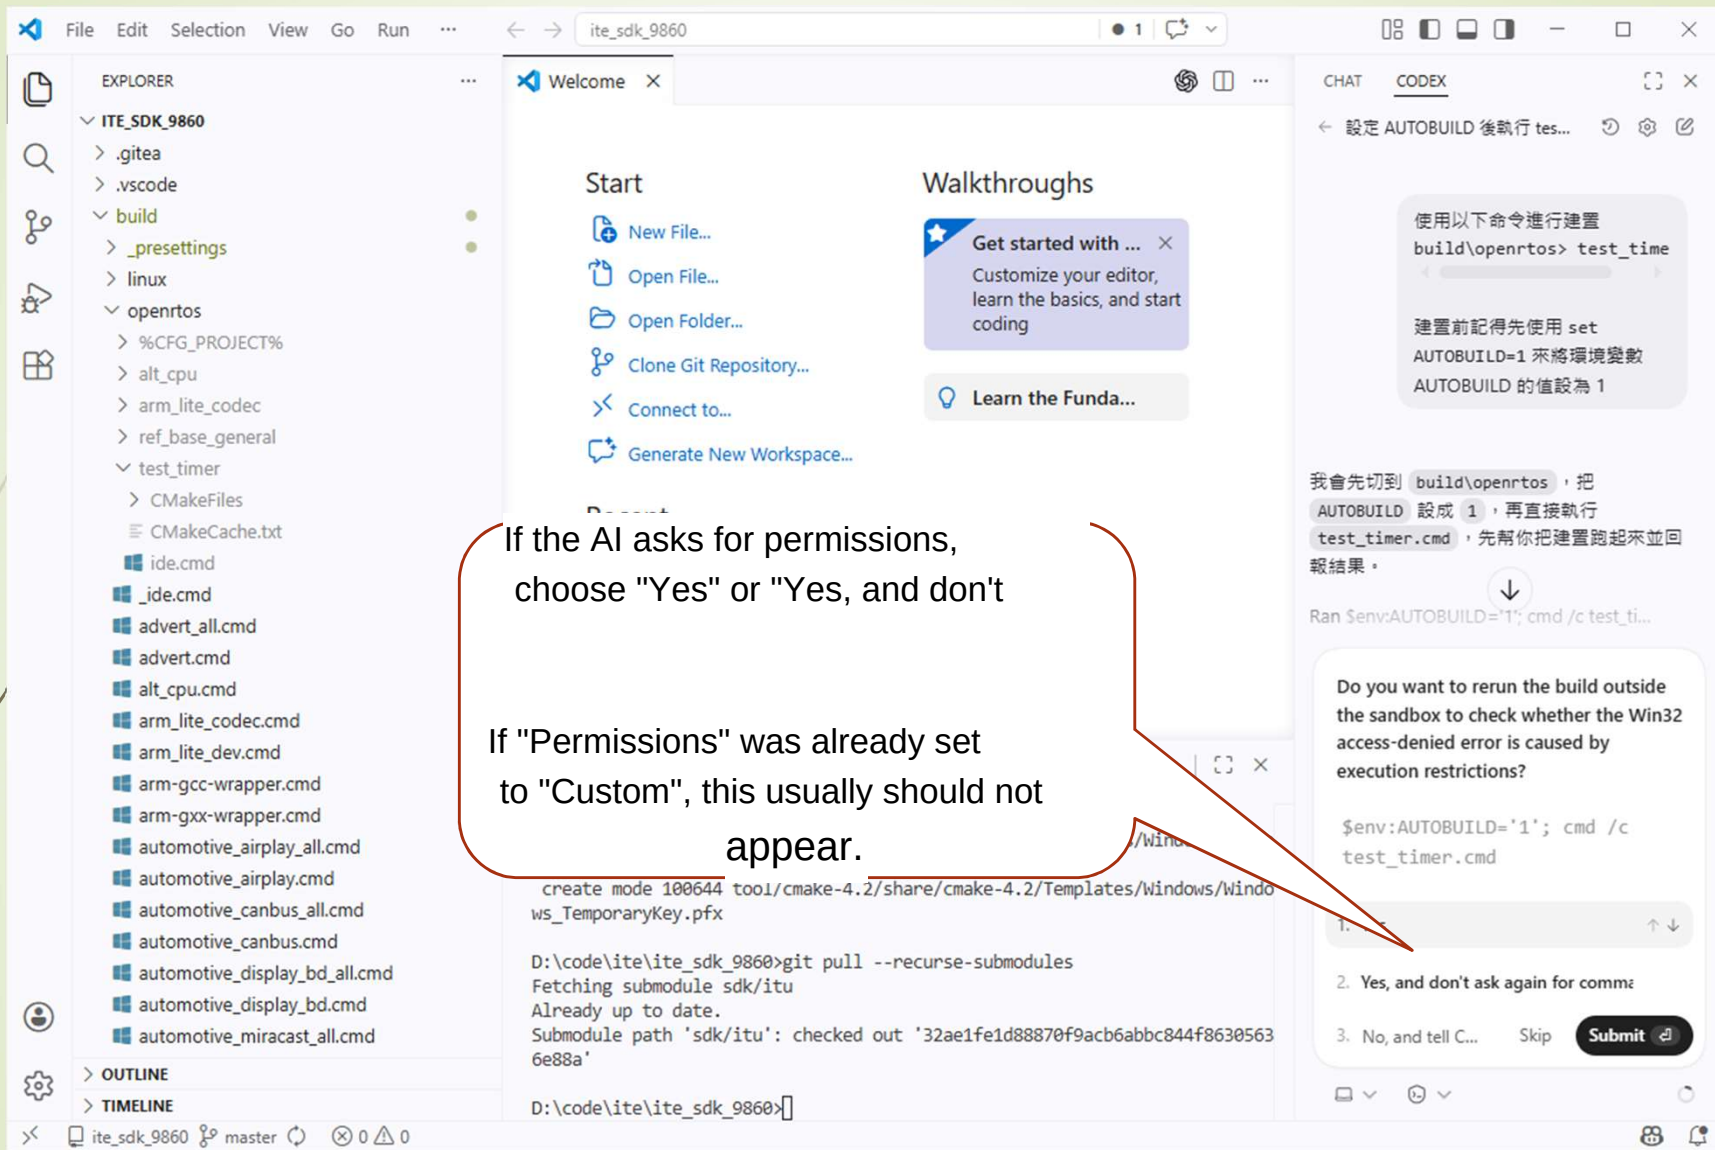

Make sure you are on the CODEX tab,

not the CHAT

2. Click "Send"

The image shows a screenshot of the Visual Studio Code (VS Code) interface. On the left, the Explorer sidebar is visible, showing a file tree for a project named 'ite_sdk_9860'. The tree includes folders like '.gitea', '.vscode', 'build', 'linux', 'openrtos', and 'test_timer'. The 'openrtos' folder is expanded, showing subfolders like '%CFG_PROJECT%', 'alt_cpu', 'arm_lite_codec', 'ref_base_general', and 'CMakeFiles'. The 'CMakeFiles' folder contains files like 'CMakeCache.txt', 'ide.cmd', '_ide.cmd', 'advert_all.cmd', 'advert.cmd', 'alt_cpu.cmd', 'arm_lite_codec.cmd', 'arm_lite_dev.cmd', 'arm-gcc-wrapper.cmd', 'arm-gxx-wrapper.cmd', 'automotive_airplay_all.cmd', 'automotive_airplay.cmd', 'automotive_canbus_all.cmd', 'automotive_canbus.cmd', 'automotive_display_bd_all.cmd', 'automotive_display_bd.cmd', and 'automotive_miracast_all.cmd'.

In the center, the 'Start' panel is visible, showing options like 'New File...', 'Open File...', 'Open Folder...', 'Clone Git Repository...', 'Connect to...', and 'Generate New Workspace...'. To the right, the 'Walkthroughs' panel is open, displaying a 'Get started with ...' card with instructions on how to customize the editor and start coding.

On the far right, the 'CHAT' panel is open, showing a conversation with an AI assistant. The chat history includes a message about setting 'AUTOBUILD' and running 'test_time'. The current message from the user asks for help with 'test_timer.cmd'. The AI assistant's response suggests running a command to set 'AUTOBUILD=1' and then running 'test_timer.cmd'. Below this, a prompt asks if the user wants to rerun the build outside the sandbox to check for Win32 access-denied errors. The user has selected the option 'Yes, and don't ask again for comments'.

A red arrow points from the left edge of the image to the Explorer sidebar. A red callout box with a white border contains the following text:

If the AI asks for permissions, choose "Yes" or "Yes, and don't

If "Permissions" was already set to "Custom", this usually should not appear.

The screenshot displays the Visual Studio Code (VS Code) interface with the `ite_sdk_9860` project open. The Explorer sidebar on the left shows the project structure, including folders like `.gitea`, `.vscode`, `build`, `_presettings`, `linux`, and `openrtos`. The `openrtos` folder is expanded, showing files like `test_timer`, `_ide.cmd`, `advert_all.cmd`, `advert.cmd`, `alt_cpu.cmd`, and various `arm_lite_*` and `arm_gcc-wrapper.*` files.

The main editor area shows the "Welcome" page with sections for "Start" (New File..., Open File..., Open Folder..., Clone Git Repository..., Connect to..., Generate New Workspace...) and "Recent" (You have no recent folders, open a folder to start.). A "Walkthroughs" section offers to "Get started with VS Co..." with the text "Customize your editor, learn the basics, and start coding".

A red speech bubble points to the terminal output, stating: "The AI replies that it is done." The terminal shows the following commands and output:

```
create mode 100644 tool/cmake-4.2/share/cmake-4.2/Templates/Windows/Windows_Temporar
yKey.pfx

D:\code\ite\ite_sdk_9860>git pull --recurse-submodules
Fetching submodule sdk/itu
Already up to date.
Submodule path 'sdk/itu': checked out '32ae1fe1d88870f9acb6abbc844f86305636e88a'

D:\code\ite\ite_sdk_9860>
```

The right sidebar shows the "CHAT" panel with a message from the AI assistant:

設定 AUTOBUILD 後執行 test_timer

使用以下命令進行建置
`build\openrtos> test_timer.cmd`

建置前記得先使用 `set AUTOBUILD=1`
來將環境變數 AUTOBUILD 的值設為 1

Worked for 28s

已依照你的要求先設定 `AUTOBUILD=1`，再在 `build/openrtos` 執行 `test_timer.cmd`，建置成功，結束碼是 0。

建置輸出重點是：

- 產生設定檔：`test_timer/.config`
- CMake 設定與產生完成
- 最後成功連結 `project\test_timer\test_timer`
- 顯示 `Done.` 與 `Script converted.`

另外建置過程中有出現幾個 assembler warning：
`writeback of base register is UNPREDICTABLE`，但沒有導致失敗。如果你要，我也可以接著幫你整理這些 warning 是從哪些檔案來啦。

The bottom status bar shows the current file is `ite_sdk_9860` on the `master` branch.

ite_sdk_9860

How to save tokens and reduce AI hallucinations

- Sources of hallucinations

- To reduce hallucinations and save tokens, start a new chat whenever your next prompt is unrelated to the current conversation.
- Files currently open in VS Code may be included in the prompt sent to the AI, so close unnecessary files or disable IDE context when it is not needed.
If your question is about specific code, keep only the relevant files open. You can also select a smaller code snippet to shorten the prompt.

You can reduce prompt length

by turning off IDE context

How to save tokens and reduce AI hallucinations

- Reasoning effort: extra high > high > medium (default, usually strong enough) > low
- Model: GPT-5.4 > GPT-5.3 Codex >> GPT-5.4 mini (under one third of GPT-5.4)
- Some tasks are fine with GPT-5.4 mini, for example:
 - Writing commit messages
 - Writing code comments
 - Generating documentation
- Stronger models are often more efficient for debugging.
- If you are low on quota, switching to GPT-5.4 mini can help it last longer.
- Codex usage and web ChatGPT usage are counted separately. If you only need a one-off answer and no local resources, use ChatGPT instead.

Important notes when using Codex

- Before use, open a specific folder in VS Code. Even an empty folder is fine. It becomes the current
- The current Codex extension in VS Code does not have revert (undo).
 - Before letting AI modify code, it is best to create a git commit first so you can restore the current state.
 - This might be improved by installing Kilo Code. Still under investigation.
- If you often reuse the same prompts, ask AI to turn them into a SKILL.
See: Agent Skills tutorial on Bilibili
<https://www.bilibili.com/video/BV1G3FNznEiS/>
- Another simple option is to write the prompt in a Markdown (*.md) file and drag that file into the chat window.

- If you do not know Markdown yet, watch
<https://www.bilibili.com/video/BV1V4gVzBEGT/>
Start at
- AI model benchmark site: <https://benchlm.ai/coding>

Prompt Tips

- Do not overthink the wording. Plain language is fine. The key is to be clear.
 - GPT suggests including "goal + background + constraints + output format". The key is a specific goal.
- If you still care a lot about prompt wording, see:
 - Prompt Engineering Guide
<https://www.promptingguide.ai/zh>
 - Or tell AI your goal and ask it to generate the prompt for you.
- You can use relative paths (relative to the current working directory) to tell AI to read or write a specific file. For example:

Analyze `sdk/share/freetype` and generate `sdk/share/freetype/docs/tutorial.md` so that someone new to the code can quickly understand it and start modifying it.

Advanced Usage

- You can enter these commands in the chat window

- Read-only planning mode. Discuss the execution plan with AI first.

- Ask AI to perform a code review on your code.

- Ask AI to create a SKILL for you.

- Ask AI to install a SKILL for you.
